UNITED STATES DISTRICT COURT  
SOUTHERN DISTRICT OF FLORIDA

CASE NO. 9:16-cv-80060-KAM

BRANDON LEIDEL, and  
MICHAEL WILSON, individually,  
and on behalf of All others Similarly Situated,

Plaintiffs,

v.

PROJECT INVESTORS, INC. d/b/a  
CRYPTSY, a Florida corporation,  
PAUL VERNON, an individual,  
LORIE ANN NETTLES, an individual,  
RIDGEWOOD INVESTMENTS, INC,  
a New Jersey corporation, and  
KAUSHAL MAJMUDAR, individually,

Defendants.

---

**ORDER APPROVING ASSIGNMENT AND CLARIFYING FINAL JUDGMENT  
AGAINST DEFENDANT PAUL VERNON**

THIS MATTER came before the Court upon the motion of Plaintiffs Brandon Leidel and Michael Wilson, individually, and on behalf of all other similarly situated members of the Certified Class (the “Plaintiff Class”), for approval of an Assignment of the Final Judgment against Defendant Paul Vernon (DE 123) (the “Judgment”) and clarification of the Judgment. Having reviewed the pleadings and being otherwise fully advised in the premises, the Court hereby ORDERS AND ADJUDGES as follows:

1. The motion of Plaintiff Class for approval for the assignment of the Judgment and for clarification of the Judgment (DE 139) is hereby GRANTED.
2. Consistent with the Assignment, North Field Tech shall have the right to enforce the Judgment.

3. The terms of the Judgment rendered July 27, 2017 (the “Judgment”) remain unchanged, but are clarified as follows:

a. The Judgment declared that 11,325.0961 Bitcoin which were stolen from Cryptsy customers on July 29, 2014 and, as of the date of the Judgment, were stored in the cryptocurrency or digital wallets identified in the table below. The 11,325.0961 Bitcoin is the property of the Plaintiff Class as provided in the Judgment:

#	Wallet	Amount of Bitcoin Stored in Wallet
1	18E3AWaadnUPQ1aMpfEoyTXN49NYAZzbpd	1,000 BTC
2	1DSxcqygQ69MxRc8oW94kQjWHzMb4BYsnG	1,000 BTC
3	1LwZYCt8dDhZDMd6uXGMwVsmWPXW9eX9Ww	1,000 BTC
4	13nAJw8jw7BiYKLnad9YGdPxybK9mgPkM6	1,000 BTC
5	1DqCNwUffFTxULH8crehynw53TwrHnrv1c	1,000 BTC
6	1AWdxqABYiDxcY1sxzPzEotvjFjq8NUY8Z	1,000 BTC
7	18nb1NQCeoZLucMdrNdu2wb7jcyDvSgr3Y	1,000 BTC
8	13QxkdrhfeQ6aCF4TBWg8knQGBmiwL2rpV	0.0961 BTC
9	17nmFFPSANbPGgDTOEEuc6xbHoaP1n6ZBb	1,000 BTC
10	14nzbWNMPjmwwy96uuFVXtj6VgChJtHvU9	1,000 BTC
11	1315LzDFcBLDBKgVAr4ZhCkcT5GXivpiuj	1,000 BTC
12	1KBy6MvcBb2qQRS5fQT92o2c5Dq2W6ygx4	1,325 BTC
	TOTAL	11,325.0961 BTC

b. Since the entry of the Judgment, the Bitcoin blockchain forked numerous times, and with each such fork, each of the wallet addresses identified in the table above were awarded forked assets. These forked assets include amounts of Bitcoin Cash (BCH), Bitcoin Gold (BTG), Bitcoin Diamond (BCD), Super Bitcoin (SBTC), Bitcoin2 (BTC2), Bitcoin Private (BCTP), Bitcoin Dark

(BTCD), and Bitcoin SV (BSV) equivalent to the amount of BTC in each of the wallets in the table above. The forked assets also include an amount of Bitcore (BTX) equal to one-half the amount of amount of BTC identified as being in each of the wallets listed in the table above.

c. Plaintiff Class are entitled to recover all of the BTC identified in the table above from the corresponding wallets identified above, and an equivalent amount of BCH, BTG, BCD, SBTC, BCT2, BCTP, BTCD, and BSV associated with each of the wallets. Plaintiff Class are also entitled to recover an amount of BTX equal to one half of the amount of BTC associated with each of the wallet addresses above.

4. The Court reserves jurisdiction to enter further orders that are proper to compel Defendant Vernon to complete all procedures in execution of the Judgment, and to otherwise facilitate the efforts of or taken on behalf of Plaintiff Class to recover the BTC and forked assets identified above.

DONE AND ORDERED in Chambers at West Palm Beach, Palm Beach County, Florida this 18<sup>th</sup> day of September, 2020.

---

KENNETH A. MARRA  
United States District Judge

**PLAINTIFFS' MOTION FOR CONDITIONAL ASSIGNMENT OF FINAL DEFAULT  
JUDGMENT AGAINST DEFENDANT PAUL VERNON  
AND FOR CLARIFICATION**

Plaintiffs Brandon Leidel and Michael Wilson, individually, and on behalf of all other similarly situated members of the Certified Class (the “Plaintiff Class”), and North Field Technology Ltd. (“North Field Tech”), respectfully seek this Court’s approval for the assignment of the Final Default Judgement Against Defendant Paul Vernon [ECF No. 123] (the “Judgment”) to North Field Tech, and for clarification of the Judgment. The purpose of the Assignment is, as set forth in more detail below, to allow North Field Tech to attempt to recover the assets subject to the Judgment for the benefit of the Plaintiff Class. In support of this Motion, Plaintiff Class and North Field Tech respectfully show the Court as follows:

1. The Court’s Judgment authorized Plaintiff Class to recover, *inter alia*, 11,325.0961 Bitcoin that were stolen from Cryptsy customers on July 29, 2014 (the “Stolen Bitcoin”). The Court’s Judgment identified both the amounts of Stolen Bitcoin and the wallets where those assets

were stored at the time. To date, the efforts of Plaintiff Class to recover the Stolen Bitcoin have been unsuccessful.

2. North Field Tech is willing to pursue efforts to collect the Stolen Bitcoin and forked assets<sup>1</sup> on a contingency, non-recourse basis. The terms and conditions for the contingency arrangement are spelled out in an Assignment Agreement between the Plaintiff Class and North Field Tech, which Assignment Agreement is contingent upon the Court's approval. A copy of the Assignment Agreement is attached for the Court's review and approval as Exhibit 1.

3. In short, if North Field Tech recovers any cryptocurrency or other assets subject to the Judgment, North Field Tech shall receive twenty percent (20%) of the recovery plus costs, and the Plaintiff Class will receive eighty percent (80%) of the recovery, all of which is subject to approval of this Court. North Field Tech is and at all times will be represented by Cozen O'Connor, a well-known and established national law firm that is ranked among the top 100 law firms in the country, and has more than 750 attorneys in 28 cities across two continents. Further, the Assignment is terminable by either party.

4. The Assignment Agreement further provides that any Stolen Bitcoin that North Field Tech recovers will be held by an escrow agent to be approved by the Court. Any recovered Stolen Bitcoin will not be distributed by the escrow agent without this Court's approval.

5. North Field Tech is an Antiguan International Business Corporation, and its Directors are both attorneys. One of its Directors, David Howard, is a member in good standing of The Florida Bar and is admitted to practice before this Court. North Field Tech has relationships with various technical services companies and the resources to attempt to recover the Stolen Bitcoin.

---

<sup>1</sup> A discussion of "forked assets" begins as paragraph 9 below.

6. Plaintiff Class and North Field Tech have structured this arrangement as an assignment of the Judgment so that North Field Tech will have standing to appear in its own name in foreign courts as may be necessary to advance efforts to recover the Stolen Bitcoin. As detailed in the Assignment Agreement, all rights associated with the Judgment shall revert to Plaintiff Class upon termination.

7. The Assignment Agreement has been structured in such a way that the Plaintiff Class has nothing to lose. If North Field Tech is successful in its efforts to recover the Stolen Bitcoin, the Plaintiff Class will benefit from those efforts. On the other hand, if North Field Tech fails in its efforts and gives up, the Plaintiff Class will still have the option of pursuing recovery of the Stolen Bitcoin on its own or through some other third-party.

8. In addition to this Court's approval of the Assignment Agreement, Plaintiff Class and North Field Tech also respectfully request that the Court clarify the Judgment to include forked assets associated with the Stolen Bitcoin. To understand the significance of forked assets, and why the Court need only clarify the award in the Judgment, a brief discussion is in order.

9. At the time the Stolen Bitcoin were stolen, there was only one form of asset associated with the bitcoin blockchain, namely, Bitcoin (BTC). In August, 2017—after the Court rendered the Judgment—a software change resulted in a hard fork or split in the blockchain that created a new asset associated with the blockchain, Bitcoin Cash (BCH). When the blockchain diverged or “forked” to create BCH, the BCH software awarded the owners of BTC an equivalent quantity of BCH, and those BCH were automatically associated with same wallet addresses as the BTC. Thus, whereas the first wallet address in the Judgment was associated with 1,000 BTC prior to this fork occurring, the same wallet address became associated with both 1,000 BTC and 1,000

BCH after the fork occurred. Each time the blockchain “forks,” the resulting assets are commonly referred to as “forked assets.”

10. Since the date of the Judgment, a number of forked assets have come into existence. These include: BCH as note above; Bitcoin Gold (BTG), which came into existence in October, 2017; Bitcore (BTX), which came into existence in November, 2017; Bitcoin Diamond (BCD), which came into existence in late 2017; Super Bitcoin (SBTC), which came into existence in December, 2017; Bitcoin2 (BTC2), which came into existence in February, 2018; Bitcoin Private (BCTP), which came into existence in late February, 2018); and Bitcoin SV (BSV), which came into existence in November, 2018. On information and belief, Bitcoin Dark (BTCD) came into existence at some point after the date of the Judgment, although the precise date is presently unknown.

11. Each time the forked assets came into existence, the wallet addresses associated with BTC received an equivalent amount of each forked asset (the only exception to this general rule was BTX, which provided 1 BTX for every 2 BTC; thus, a wallet that had 1325 BTC prior to the BTX fork received 625.5 BTX after the fork). Thus, since this Court’s entry of the Judgment, each of the wallet addresses listed in the Judgment have received forked assets in an amount equivalent to the amounts of BTC listed in the Judgment (except for BTX, where each of the wallet addresses listed in the Judgment received half as much BTX as BTC).

12. If the Plaintiff Class had been able to recover the Stolen Bitcoin in 2017 consistent with the Judgment, the Plaintiff Class would be the owners of all of the BTC together with an equivalent amount of forked assets (e.g., BCH, BSV, etc.) that came into existence with each forking of the blockchain. As such, the Plaintiff Class should be entitled to recover both the Stolen

Bitcoin and the other assets—the forked assets—that became associated with the Stolen Bitcoin following the entry of the Judgment by virtue of the forking of the blockchain.

13. Since the Stolen Bitcoin is capable of being transacted or transferred separately from the forked assets, clarification of the Judgment will prevent those currently in possession of the wallets referenced in the Judgment from retaining the forked assets that rightfully belong to the Plaintiff Class.

14. Thus, Plaintiff Class and North Field Tech seek clarification of the Judgment so that they can recover the Stolen Bitcoin together with all forked assets (e.g., BCH, BSV, etc.) that are now associated with the Stolen Bitcoin. Accordingly, Plaintiff Class and North Field Tech respectfully request that this Court enter an Amended Judgment reflecting that the Plaintiff Class, and North Field Tech following approval of the Assignment Agreement, are entitled to recover the Stolen Bitcoin and all related forked assets.

WHEREFORE, Plaintiff Class and North Field Tech respectfully request that this Court amend the Judgment and enter an Order approving the Assignment Agreement so that North Field Tech may commence efforts to recover the Stolen Bitcoin.

Respectfully submitted,

# EXHIBIT 3

## What is RenBridge?

RenBridge enables the simple wrapping of digital assets on different blockchains. For example, RenBridge allows users to take **BTC** and put it on **Ethereum**, as an ERC-20 called renBTC.

## How does it work?

Using RenVM, a universal translator, it converts digital assets to the format needed by its destination chain. For example, RenVM takes **BTC**, holds it, and then converts it to an **ERC-20** with a 1:1 ratio to ensure your renBTC is always backed by the same amount of **BTC**. Find out more [here ↗](#).

## How safe is it?

RenVM holds on to your assets when they are on other blockchains. RenVM is new technology, and security audits ↗ don't completely eliminate risks. Please don't supply assets you can't afford to lose!

# Unveiling REN (REN): Bridging Different Blockchains with RenVM

Beginner Dec 15, 2023

Click to discover how RenVM tackles the challenge of blockchain interoperability, allowing for secure and trustless cross-chain asset transfers.

What is the Ren Protocol?

How Does Ren Protocol Work?

Main Features of REN Protocol

Ren 2.0

What is REN?

Ren Foundation

Is Ren a Good Investment?

## Take Action on REN

In the ever-expanding landscape of decentralized finance (DeFi), the Ren Protocol emerges as a groundbreaking force, reshaping how we perceive and utilize blockchain interoperability. Ren, formerly known as Republic Protocol, aims to foster a seamless exchange of assets across decentralized ecosystems. This article delves into Ren Protocol's inner workings and examines its potential to create a more interconnected and collaborative DeFi space.

## What is the Ren Protocol?

Source: <https://www.coinclarified.com/p/what-is-the-ren-protocol-the-rise-of-universal-interoperability/>

REN protocol (formerly known as Republic Protocol) is an open protocol enabling the permissionless and private transfer of value across different blockchains. Ren protocol operates to facilitate the transfer of various crypto assets from other blockchains to Ethereum, thus enabling its users to access DeFi products without selling any assets.

With Ren Protocol, users can lock their digital assets like Bitcoin in a smart contract in exchange for the equivalent Ethereum. This format allows users to take advantage of Ethereum's defi applications like [Aave](#) and [Compound](#) without purchasing new

Ethereum tokens or making use of a bridging protocol. Ren Protocol's vision is to create a truly universal protocol that facilitates the transfer of value between any two blockchains, regardless of their native assets or governance structures.

an open, interoperable, and decentralized web by allowing any application to access any asset on any chain.

## History of Ren Protocol

Ren Protocol was founded in 2017 by software developers [Taiyang Zhang](#), a venture partner with [Alameda Research](#), and [Loong Wang](#), who is also a founding member of [Rook](#) (formerly known as KeeperDAO). They were classmates at the Australian National University and worked together at the same start-up after graduation.

The beta mainnet was launched in 2018, and the platform rebranded to Ren in 2019. Before the beta launch, the project held an initial coin offering (ICO) and raised up to [\\$34 million](#).

## How Does Ren Protocol Work?

Ren protocol's primary role is to act as a custodian for digital assets while they are moved between different blockchains. As such, it secures the assets and generates corresponding tokens on the destination blockchain. It achieves this through a user-friendly interface and smart contracts known as RenERC20s that act as bridges between blockchains. These "RenERC20s" are compatible with the ERC20 token standard and ensure that the value of other chains' native tokens remains the same after conversion.

For example, if a user wants to convert their BTC, the Ren Protocol Virtual Machine (RenVM) will hold the BTC and create an ERC-20 token called the renBTC on the Ethereum blockchain with a 1:1 ratio. Due to this, the value of renBTC will always be equal to BTC. This process can be extended to almost all digital assets and smart contract systems, including native tokens such as Dogecoin and the Polkadot blockchain. As a result, the platform simplifies interactions between different blockchains for developers and users.

## Main Features of REN Protocol

Ren protocol serves as a pillar of interoperability, enabling the movement of digital assets between different blockchain networks in a trustless and secure manner. The protocol was designed with innovation and versatility in mind and offers features that collectively redefine the landscape of decentralized finance (DeFi), including the following.

### **RenVM**

The RenVM (Ren Virtual Machine) powers the Ren ecosystem and enables the creation of Ethereum-based ERC20 tokens representing cryptocurrencies at a 1:1 ratio. Users can then burn their tokenized assets to redeem their locked assets. Since Ren Protocol is a decentralized, permissionless, and trustless custodian that can lock assets on-chain and mint them individually, RenVM is the engine that powers this approach.

RenVM is made up of thousands of nodes called Darknodes. These darknodes are a network of computers that earn rewards for contributing to the network's computing power and storage space. Virtual machine technology allows one computer to run multiple "VMs." These decentralized virtual machines spread over thousands of computer and working in sync provides significant scalability for the platform. As compensation for their work, the Darknodes earn a share of the transacted volume through the RenVM network.

Anyone can run a Darknode, but each node must run the RenVM software via a Virtual Private Server and deposit 100,000 REN tokens (about 2.679621 ETH) into the Darknode Registry Contract. This serves as an incentive mechanism for the node operators to refrain from malicious behavior at the risk of forfeiting their deposit. Darknodes are also randomly arranged into groups called shards once daily, and this process fortifies RenVM against attacks on the network by constantly moving and regenerating potential data targets.

RenVM uses advanced technology to facilitate a smooth exchange and simultaneously protect the privacy of users, and some of these technologies include:

This cryptographic principle divides secret data into parts held by different participants. Ren protocol uses this process to securely store private keys used in the Ren network, even from the Darknodes themselves.

### **Secure Multiparty Computation (sMPC)**

This algorithm enables developers' code to run without disclosing any input or output. sMPC reveals the infinite possibilities of sharing data privately between competing parties so they can cooperate and gain mutually beneficial insights from that data. It provides a solution to the growing issue of privacy and data collection.

### **Byzantine Fault Tolerance (BFT)**

BFT is an algorithm that allows the Ren network to function optimally regardless of whether some nodes stop working. This helps prevent system failures and false transactions, thus increasing the overall reliability of the platform.

## **RenBridge**

RenVM accepts tokens from one blockchain during the swapping process and generates new tokens on another through RenBridge. The RenVM will then hold the original funds in storage, reversing the process when the user wishes to retrieve their bitcoins.

## **Ren 2.0**

Source: <https://medium.com/renproject/introducing-ren-2-0-43025b3d5d6>

Ren protocol is invested in the mass adoption of Bitcoin as a global revolution in monetary policy. The project seeks to achieve this through a state-of-the-art interoperability protocol designed to cater to Bitcoin users' trust and security needs and decentralized financial markets. Ren 2.0 brings support for the Binance Smart Chain in addition to Ethereum operability.

Ren 2.0 has expanded to incorporate several assets across smart contract chains, including Arbitrum, Polygon, and Solana. This multichain support facilitates interoperability between different ecosystems in the crypto industry.

In addition, the protocol received two significant upgrades. First, the direct bridging of renASSETS between smart contract chains was enabled, allowing for a faster and cheaper transfer process. Second, the updated protocol allows for generic tokens, including stablecoins and native assets like ETH, to be moved between these smart contract chains.

## What is REN?

This is the native token of the Ren ecosystem and powers its smooth running. It serves two principal functions: firstly, to pay trade fees for any orders made on RenVM and next to pay bonds to the Registrar, a smart contract running the Darknodes in the Ren ecosystem.

Unlike other crypto projects, users don't need to buy or hold REN to access the platform. Instead, they pay fees in the native blockchain token through which they're handling their trading activities. For instance, if a specific user wants to access the Ren platform using renBTC, they would have to pay the transaction fee in Bitcoin during conversion.

## Ren Tokenomics

REN has a total and circulating supply of 1 billion REN and a market cap of up to \$51.09 million. The token was distributed as follows:

- 65.2% was sold to investors, with 56.6% being sold in a private sale and 8.6% in a public sale
- 5% was allocated to community development and partners
- 9.9% went to the Ren team and advisors
- 19.9% went into the company reserve

## Ren Foundation

On September 25, 2023, Ren announced the launch of the Ren Foundation, an independent non-profit organization committed to the research and development of trustless blockchain interoperability. It will support the research, development, growth, and awareness of the Ren protocol. It will also support implementations of the Ren protocol and its third-party developer and application ecosystems.

Source: <https://twitter.com/renprotocol>

Ren's first version lost its development funding when Alameda Research acquired its initial development team and later filed for bankruptcy. However, its first director, David Perkins was able to raise a 285,000 USDT grant from the Ren community to develop a decentralized staking protocol to generate more rewards for node operators without

The Ren Foundation's immediate focus is on the research and development of the Ren v2. Most interoperable projects lack support for Bitcoin because of its scripting limitations, but the Ren Foundation plans to double down on it.

## Is Ren a Good Investment?

Ren protocol facilitates trustless and secure cross-chain asset transfers, allowing users to move digital assets between blockchains seamlessly. However, it must be noted that the cryptocurrency market is quite volatile, so every investor is advised to do extensive research and consult qualified financial professionals before investing in REN.

## Take Action on REN

REN is available for purchase from both centralized and decentralized exchanges, including [gate.io](#). Check the REN price here and begin trading your favorite pairs.

2

Early last year, [Alameda](#) acquired Ren in a partnership with the previous Ren leadership, to secure long-term development funding. Alameda has since been funding the development team on a quarterly basis. Last week, the FTX

Group, which Alameda falls under, commenced Chapter 11 proceedings. Therefore, the Ren development team only has funding until the end of Q4.

The goal of the Ren team has always been to launch an open-source and community-run version of the Ren network, and work towards this goal culminated into what we call Ren 2.0. It is a new architecture based on Geth with our new MPC implementation of FROST, which enables deployment of EVM-based applications on Ren with native multichain support for all blockchains integrated with Ren, and supports all bridging features Ren 1.0 offers as well. The switch to FROST as the MPC protocol lays the ground for a truly decentralized MPC network, as it is scalable to thousands of nodes, which if deployed would make it the most decentralized cross-chain platform live in the Web3 world.

A Ren 2.0 testnet is about to be deployed to showcase its capabilities, but there is additional work to test, harden and audit the new architecture, as well as finish new node client interfaces and general developer tooling, which would not be fully ready by the end of Q4. As such, to get to the Ren 2.0 stage where we have a fully open-source and community-run cross-chain network with its own independent incentive structure, the Ren development team would need to secure additional funding.

## Next steps

### Funding

To get to the Ren 2.0 stage with full community control, the Ren development team will need to secure additional funding. This is currently being explored in a manner that would also benefit the Ren community the most. As talks with investors proceed, we will share the opportunities that are the most promising to the community. Through ongoing discussions

with the community on which opportunity seems the most promising, when ready, a formal governance proposal would be proposed to the community. If approved, the situation would be fully resolved and would move us forward. If rejected, the community would need to lead to another round of discussions and proposals, until final decisions are made.

## Sunsetting Ren 1.0

When announcing Ren 2.0 back in August, it was outlined how the Ren ecosystem would transition from Ren 1.0 to Ren 2.0 in a safe, slow, methodical manner, to ensure the safety, integrity, and continuance of the Ren ecosystem without disruptions. But given that Ren 1.0 was run under Alameda leadership which is now in bankruptcy proceedings, the Ren development team believes it is best to sunset the Ren 1.0 network and launch Ren 2.0 earlier than previously intended, to ensure the Ren ecosystem's safety and integrity, at the tradeoff of a shorter disruption of service. While the Ren 1.0 network has remained and still remains fully safe and operational, marking this event as the end of the Alameda's involvement in the project by sunsetting Ren 1.0, safeguards the reputation, integrity, and hence long-term prospects of the Ren ecosystem.

We believe roughly these following steps are the safest course of action for the Ren ecosystem:

- Disable minting through Ren 1.0, while keeping burns enabled (bridged assets are always backed 1:1)
- After 30 days, shut down Ren 1.0

In parallel to the above:

- Deploy Ren 2.0 on testnet

- Test and harden the Ren 2.0 testnet together with the community
- Deploy Ren 2.0 on mainnet

We will additionally be transitioning away from the [renproject.io](https://renproject.io) domain which has been owned by Alameda. All current sites will be hosted on IPFS and control will be transferred over to the RenDAO moving forward.

## How can you help?

The Ren development team is incredibly proud of the achievement of Ren 1.0, which has processed ~\$13 billion in cross-chain volume since launch, enabling the liquid movement of assets between chains, all the while remaining 100% secure with no hacks.

The future is even brighter, as Ren 2.0 would be a paradigm shift in terms of the possibilities available to build truly native multichain applications, on the most secure and decentralized cross-chain platform in crypto. The Ren development team is fully committed into bringing this next evolution of the multichain future alive, and would be nothing but passionate and excited to do so, if the community chooses to support us.

We therefore encourage the Ren community to now more than ever engage in the discussions regarding funding and incentivizing Ren 2.0 deployment and its following ecosystem growth. Make your voices heard and propose your best ideas! With your help, we can transition to a fully community-run Ren network, and leave Alameda behind us.

And if anyone wants to reach out to the team directly, you can find us on [Discord](#) or [DM us on Twitter!](#)

Onwards and Upwards,

Ren Team

**DECLARATION OF ROMAN BIEDA**  
**Pursuant to 28 U.S.C. § 1746 and Fla. Stat. § 95.525**

Pursuant to 28 U.S.C. § 1746 and Fla. Stat. § 95.525, I, Roman Bieda, declare as follows:

1. My name is Roman Bieda. I am over 18 years old. I have personal knowledge of the facts herein, and if called and sworn as a witness, I could and would competently testify thereto.

**Educational Background and Prior Work Experience**

2. I gained experience as a Forensic Senior Data Analyst at PWC, both in Poland and UK; BI Consultant at INTENSE Group Sp. z o.o.; and Project Support at The Boston Consulting Group. I received a master's degree in Economics from The Krakow University of Economics. I am an MIT Certified Blockchain Expert. I was admitted as an expert in US federal court.

**Employment at Coinfirm**

3. I currently serve as the Head of Fraud Investigations of Coinfirm Ltd. ("Coinfirm"). I have worked at Coinfirm since 1<sup>st</sup> of July 2020 in this role. In my role as Head of Fraud Investigations, I'm the product owner of Coinfirm's Asset Tracking and Fraud Investigation tools

and I lead Coinfirm's Asset Tracking & Investigations team on thousands of blockchain investigations.

### **My Tracing Analysis**

4. Coinfirm deploys a Destination of Funds analysis to identify the digital wallet addresses that hold or have received funds originating from the wallet addresses identified in Tables 1 and 2 of this Court's Amended Final Default Judgment [ECF No. 157] and the Order for Asset Freeze Injunction and to Transfer the Stolen Bitcoin to Assignee ("Permanent Injunction") [ECF No. 177].

5. Our system uses "Pro Rata Distribution by All Outputs" tracing methodology ("primary methodology") supported by additional four different tracing methodologies: "First In First Out," "Last In First Out", "Pro Rata Distribution By Blocks", and "Taint Last" ("supporting methodologies") to trace fraudulent transactions.

6. Whether traced funds are received by a wallet controlled by a Virtual Asset Service Provider ("VASP"), which includes custodial cryptocurrency exchanges, digital asset trading platforms, and wallet services, has an impact on our tracing analysis. Once tainted funds are received by a VASP, they can no longer be traced because most VASPs operate pooling addresses used to store customer deposits and to execute transfers. When a user of the VASP wishes to transfer cryptocurrency from their exchange account, often the VASP will use cryptocurrency held in one of its pooling addresses to settle the transaction, rather than transfer the specific user's cryptocurrency to settle the transaction. The tracing of the Claimant's cryptocurrency, therefore, must stop once those funds are received by a wallet controlled by a VASP.

7. Defrauded cryptocurrency funds are typically passed through complex layering/mixing schemes aimed at concealing the trail of funds. One method is using blockchain

transaction mixers (“tumblers”, “anonymizers”, “CoinJoin”), which are services that attempt to confuse the trail of blockchain transactions. In most cases funds are divided into smaller, equal portions and are subsequently mixed at random with similarly sized portions of a number of “pool” or other users’ funds. Coinfirm’s algorithm, as the first of its kind, can trace crypto assets through the mixing transactions and provide the full evidence of the movement of stolen assets even once they have passed through a mixing service.

### **My Tracing Conclusions**

8. The first attached spreadsheet, Appendix A, shows the wallet addresses into which the Stolen Bitcoin and Forked Digital Assets originally held in Tables 1 and 2 of the Amended Final Default Judgment and Permanent Injunction were transferred through March 30, 2022.

9. The movements identified on pages 26-39 of Appendix A generally show the transfers of the 500.052319 Stolen Bitcoin identified by the Receiver on May 17, 2021 from July 2014 through March 30, 2022.

10. Further, the movements identified on pages 1-25 of Appendix A show the initial transfers of the 11,325.0961 BTC from the addresses listed in Table 1 of the Amended Final Default Judgment and Permanent Injunction (the “Originally Identified Stolen Bitcoin”). As Appendix A shows, on March 29, 2022, the entire corpus of the 11,325.0961 BTC Originally Identified Stolen Bitcoin was transferred in increments of 15-18 BTC (with two transactions in increments of less than 1 BTC) from the addresses listed in Table 1 into over 650 new private wallet addresses (the “Intermediate Private Wallet Addresses”). These Intermediate Private Wallet Addresses had no prior transactional history before the assets were moved into them. Only a person who controlled the private keys to the original wallet addresses listed in Tables 1 and 2 could have executed these transfers. Therefore, I conclude that Paul Vernon, or someone working at his

direction and/or under his control who had access to the private keys to the wallet addresses listed in Tables 1 and 2 of the Amended Final Default Judgment and Permanent Injunction, is/are responsible for these movements.

11. Since March 29, 2022, the person(s) involved have, on a daily bases, been actively transferring the Stolen Bitcoin and some of the Forked Digital Assets into the Intermediate Private Wallet Addresses and from the Intermediate Private Wallet Addresses into additional new private wallets in a continuous effort to hide the Stolen Bitcoin. In addition, they have been moving the Stolen Bitcoin and some of the Forked Digital Assets onto various cryptocurrency exchanges to be liquidated. According to our tracing analysis, as of December 8, 2022, 685 BTC of the Stolen Bitcoin have been deposited with Ren, as identified in Appendix B. This Appendix contains all of the Ren wallet addresses into which the 685 BTC have been deposited. Appendix C is a simplified<sup>1</sup> diagram showing the flow of the 685 BTC from the original Tables 1 & 2 wallet addresses listed in the Amended Final Default Judgment to Ren.

I declare under penalty of perjury under the laws of the United States of America that the foregoing is true and correct.

Executed on this 27th day of December 2022.

---

Roman Bieda  
Head of Fraud Investigations at Coinfirm

---

<sup>1</sup> Because the stolen BTC was transferred and split up so many times, condensing all the transaction information into one chart would be impractical. This chart do not depict all known transactions, or even all bitcoin addresses related to the activity depicted. Rather, it is meant to be illustration of the general flow of the stolen BTC from one point to another.

Tab	Column	Description
Transactions summary	Address To	The blockchain address to which the transaction was sent. Note: there may be multiple addresses receiving funds in one blockchain transaction.
Transactions summary	Owner (Address To)	An entity or an individual identified as managing the private keys allowing to distribute funds from blockchain addresses corresponding to these private keys.
Transactions summary	Transaction Hash	Unique identifier of a particular blockchain transaction.
Transactions summary	Transfer Date (UTC)	The time of adding indicated block to the blockchain ledger which is identical with the time of indicated transaction, provided in UTC standard.
Transactions summary	Funds under claim (average confirmed with the five tracing methodologies; in cryptocurrency unit)	The amount of stolen funds traced - the average from the five tracing methods. Confirm use Destination of Funds analysis to identify addresses that hold or received funds originating from starting transfers indicated by Client as constituting assets misappropriation. An algorithm uses five different tracing methodologies, "First In First Out", "Last In First Out", "Pro Rata Distribution by Blocks", "Pro Rata Distribution by All Outputs", and "Taint Last", to trace the fraudulent transaction. Only results confirmed with the said 5 tracing methods are provided, namely only addresses for which the amount traced by each tracing method varies less than 20% from the amount equal to the mean from the 5 tracing methods.
Transactions summary	Asset Type	Asset Type – type of asset that was transferred by the transaction, for example "AMLT" for AMLT token on ETH. The value of this data field is "native", if the asset type is the first asset supported by given blockchain network (e.g. ETH for Ethereum blockchain). Note: multiple assets types may be carried in one transaction. Note 2: No such field in the BTC blockchain.
Receiving Addresses summary	Owner Name	An entity or an individual identified as managing the private keys allowing to distribute funds from blockchain addresses corresponding to these private keys.
Receiving Addresses summary	Beneficiary Name	The identified beneficiary of the address owned by the address owner.
Receiving Addresses summary	Destination Address	<p>"If Owner Name is empty then: addresses that currently hold traced funds. Those funds can be traced further, once a new transaction occurs.</p> <p>If the Owner Name is identified then: the address that received traced funds, but the funds can't be traced any further - typically these are addresses with the identified owner e.g. cryptocurrency exchanges, payment processors, online wallet services.</p> <p>Whether traced funds are received by a VASP-controlled* wallet or not has an impact on our tracing analysis. Tracing of the Client's cryptocurrency will continue until either those funds are received by a VASP-controlled wallet, or the funds are received by a wallet that still currently holds those funds (i.e. there has been no further onward dissipation of the funds). Most VASPs operate pooling addresses used to store customer deposits and to execute transfers. When a user of the VASP wishes to transfer cryptocurrency from their exchange account, often the exchange will use cryptocurrency held in one of its pooling addresses to settle the transaction, rather than transfer cryptocurrency held in a wallet that only includes that specific user's cryptocurrency. In these cases, the records matching user account transactions to the movements on the blockchain showing which addresses have been used to settle the transaction are kept only by the exchange. These internal records are not publicly available. The tracing of the Claimant's cryptocurrency must, therefore, stop once those funds are received by a wallet controlled by an exchange as we do not know which user account transactions relate to transfers from these wallets."</p> <p>* The term 'Virtual Asset Service Provider' or 'VASP' was introduced by the FATF to recognize those firms that perform services relating to 'Virtual Assets' or 'VAs' which definition covers cryptocurrencies and other blockchain assets. The 'VASP' definition covers the providers of custodial digital wallet services, transfer services and brokerage or investment-related services. A VASP under these regulations would become an 'obliged entity' with all the consequences and obligations to comply with the same standards as traditional financial institutions such as banks.</p>
Receiving Addresses summary	Cryptocurrency Unit	Blockchain Type – the symbol of blockchain network on which the transaction was executed, for example "BTC" for Bitcoin or "ETH" for Ethereum.

Receiving Addresses summary	Asset Type	Asset Type – type of asset that was transferred by the transaction, for example "AMLT" for AMLT token on ETH. The value of this data field is "native", if the asset type is the first asset supported by given blockchain network (e.g. ETH for Ethereum blockchain). Note: multiple assets types may be carried in one transaction. Note 2: No such field in the BTC blockchain.
Receiving Addresses summary	Funds under claim (average confirmed with the five tracing methodologies; in cryptocurrency unit)	The amount of stolen funds traced - the average from the five tracing methods. Confirm use Destination of Funds analysis aims to identify addresses that hold or received funds originating from starting transfers indicated by Client as constituting assets misappropriation. An algorithm uses five different tracing methodologies, "First In First Out", "Last In First Out", "Pro Rata Distribution by Blocks", "Pro Rata Distribution by All Outputs", and "Taint Last", to trace the fraudulent transaction. Only results confirmed with the said 5 tracing methods are provided, namely only addresses for which the amount traced by each tracing method varies less than 20% from the amount equal to the mean from the 5 tracing methods.
Receiving Addresses summary	Tainted Inflow Start Time	The time of the first Tainted Funds inflow of the indicated asset type and to the specific "Address DoF", provided in UTC format. Note: The earliest date from the 5 tracing methods is taken
Receiving Addresses summary	Tainted Inflow End Time	The time of the last Tainted Funds inflow of the indicated asset type and to the specific "Address DoF", provided in UTC format. Note: The latest date from the 5 tracing methods is taken

# APPENDIX B

Owner Name (Address To)	Address To	Transaction Hash	Transfer Date (UTC)	Assets under claim (average across the five tracing methodologies; in cryptocurrency unit)	Cryptocurrency Unit

**IN THE UNITED STATES BANKRUPTCY COURT  
FOR THE DISTRICT OF DELAWARE**

In re:

FTX TRADING, LTD., *et al.*,

Debtors.<sup>1</sup>

Chapter 11

Case No. 22-11068 (JTD)

(Jointly Administered)

**DECLARATION OF ROMAN BIEDA  
Pursuant to 28 U.S.C. § 1746**

Pursuant to 28 U.S.C. § 1746, I, Roman Bieda, declare under penalty of perjury as follows:

1. My name is Roman Bieda. I am over 18 years old. I have personal knowledge of the facts herein, and if called and sworn as a witness, I could and would competently testify thereto.
2. I submit this declaration (the “Declaration”) in support of the claim of North Field filed in the above-captioned jointly administered case and/or any of the cases being jointly administered.

**Educational Background and Prior Work Experience**

3. I gained experience as a Forensic Senior Data Analyst at PWC, both in Poland and UK; BI Consultant at INTENSE Group Sp. z o.o.; and Project Support at The Boston Consulting Group. I received a master’s degree in Economics from The Krakow University of Economics. I am an MIT Certified Blockchain Expert. I was admitted as an expert in US federal court.

**Employment at Coinfirm**

4. I currently serve as the Head of Fraud Investigations of Coinfirm Ltd. (“Coinfirm”).

---

<sup>1</sup> The last four digits of FTX Trading Ltd.’s and Alameda Research LLC’s tax identification numbers are 3288 and 4063, respectively. Due to the large number of debtor entities in these chapter 11 cases, a complete list of the Debtors and the last four digits of their federal tax identification numbers is not provided herein. A complete list of such information may be obtained on the website of the Debtors’ proposed claims and noticing agent at <https://cases.ra.kroll.com/FTX>.

I have worked at Coinfirm since 1<sup>st</sup> of July 2020 in this role. In my role as Head of Fraud Investigations, I'm the product owner of Coinfirm's Asset Tracking and Fraud Investigation tools and I lead Coinfirm's Asset Tracking & Investigations team on thousands of blockchain investigations. A true and correct copy of my resume is attached here as Appendix A.

### **My Tracing Analysis**

5. Coinfirm deploys a Destination of Funds analysis to identify the digital wallet addresses that hold or have received funds originating from the wallet addresses identified in Tables 1 and 2 of this Court's Amended Final Default Judgment [ECF No. 157] and the Order for Asset Freeze Injunction and to Transfer the Stolen Bitcoin to Assignee ("Permanent Injunction") [ECF No. 177].

6. Our system uses "Pro Rata Distribution by All Outputs" tracing methodology ("primary methodology") supported by additional four different tracing methodologies: "First In First Out," "Last In First Out", "Pro Rata Distribution By Blocks", and "Taint Last" ("supporting methodologies") to trace fraudulent transactions.

7. Whether traced funds are received by a wallet controlled by a Virtual Asset Service Provider ("VASP"), which includes custodial cryptocurrency exchanges, digital asset trading platforms, and wallet services, has an impact on our tracing analysis. Once tainted funds are received by a VASP, they can no longer be traced because most VASPs operate pooling addresses used to store customer deposits and to execute transfers. When a user of the VASP wishes to transfer cryptocurrency from their exchange account, often the VASP will use cryptocurrency held in one of its pooling addresses to settle the transaction, rather than transfer the specific user's cryptocurrency to settle the transaction. The tracing of the Claimant's cryptocurrency, therefore, must stop once those funds are received by a wallet controlled by a VASP.

8. Defrauded cryptocurrency funds are typically passed through complex layering/mixing schemes aimed at concealing the trail of funds. One method is using blockchain transaction mixers (“tumblers”, “anonymizers”, “CoinJoin”), which are services that attempt to confuse the trail of blockchain transactions. In most cases funds are divided into smaller, equal portions and are subsequently mixed at random with similarly sized portions of a number of “pool” or other users’ funds. Coinfirm’s algorithm, as the first of its kind, can trace crypto assets through the mixing transactions and provide the full evidence of the movement of stolen assets even once they have passed through a mixing service.

### **My Tracing Conclusions**

9. Coinfirm’s tracing technology showed that on March 29, 2022, the entire corpus of the 11,325.0961 BTC Originally Identified Stolen Bitcoin listed in Table 1 of the Amended Final Default Judgment was transferred in increments of 15-18 BTC (with two transactions in increments of less than 1 BTC) from the addresses listed in Table 1 into over 650 new private wallet addresses (the “Intermediate Private Wallet Addresses”). These Intermediate Private Wallet Addresses had no prior transactional history before the assets were moved into them. Only a person who controlled the private keys to the original wallet addresses listed in Tables 1 and 2 could have executed these transfers. Therefore, I conclude that Paul Vernon, or someone working at his direction and/or under his control who had access to the private keys to the wallet addresses listed in Tables 1 and 2 of the Amended Final Default Judgment and Permanent Injunction, is/are responsible for these movements.

10. Since March 29, 2022, the person(s) involved have, on a daily bases, been actively transferring the Stolen Bitcoin and some of the Forked Digital Assets into the Intermediate Private Wallet Addresses and from the Intermediate Private Wallet Addresses into additional new private

wallets in a continuous effort to hide the Stolen Bitcoin. In addition, they have been moving the Stolen Bitcoin and some of the Forked Digital Assets onto various cryptocurrency exchanges to be liquidated. According to our tracing analysis, as of December 29, 2022, 34 BTC of the Stolen Bitcoin were deposited with FTX, as identified in Appendix B. This Appendix contains all of the FTX wallet addresses into which the 34 BTC have been deposited. Appendix C is a simplified<sup>2</sup> diagram showing the flow of the 34 BTC from the original Tables 1 & 2 wallet addresses listed in the Amended Final Default Judgment to FTX.

I declare under penalty of perjury under the laws of the United States of America that the foregoing is true and correct.

Executed on this 30th day of December 2022.

---

Roman Bieda  
Head of Fraud Investigations at Coinfirm

---

<sup>2</sup> Because the stolen BTC was transferred and split up so many times, condensing all the transaction information into one chart would be impractical. This chart do not depict all known transactions, or even all bitcoin addresses related to the activity depicted. Rather, it is meant to be illustration of the general flow of the stolen BTC from one point to another.

# APPENDIX A

## 1. Qualifications of Roman Bieda

Roman is Head of Fraud Investigations at Coinfirm. He is a recognized Fraud Investigator both in the traditional and blockchain space. He is the Product Owner of Coinfirm's Asset Tracking and Fraud Investigation tools, which were proven to be reliable and helpful in multiple investigations. Roman gained experience as a Forensic Senior Data Analyst at PwC both in Poland and UK; BI Consultant at INTENSE Group Sp. z o.o.; and Project Support at The Boston Consulting Group. He received a master's degree in Economics from The Krakow University of Economics.

### **Coinfirm Limited – Head of Fraud Investigations | Jul 2020 – Present**

- Head of Asset Tracking & Investigations team,
- MIT Certified Blockchain Expert,
- Qualified as a cryptocurrency expert in criminal investigations,
- Leading hundreds of blockchain investigations – in total traced billions of USD in various cryptoassets,
- Cooperating with Corporates, Police Forces and other agencies from all over the world on forensic investigations including hack, fraud, murder, assault, child protection and terrorism,
- Development of Coinfirm's Asset Tracking and Fraud Investigation tools.

### **PwC - Forensic Senior Data Analyst | Apr 2017 – Jul 2020 (3 y 4 m)**

- Forensic investigations (e-discovery, forensic data analysis, fraud, bribery, conflict of interest, tax fraud, AML),
- Development of forensic analytical tools using SQL, Alteryx, Tableau, VBA and Python,
- 8-month on-site project in Deutsche Bank in London.

### **The Boston Consulting Group – Project Support | Nov 2016 – Mar 2017 (5 m)**

- Data collection and analysis,
- VBA programmer.

### **INTENSE Group Sp. z o.o. - BI Consultant | Jul 2015 – Oct 2016 (1 y 4 m)**

- Business processes and workflow audit and development,
- Business intelligence system implementation.

### **The Krakow University of Economics | Oct 2011 – Jun 2016 (5 y)**

- Master's degree in Economics (2014 - 2016),
- Bachelor's degree in Accounting and controlling (2011 – 2014).

# APPENDIX C

## Cryptsy Flow of Funds (after ChipMixer identification)

Splitting funds into chunks of ~15-19 BTC:  
10 x 1'000BTC into 58 or 59 new addresses  
1 x 1'325BTC into 78 new addresses

2014/07/29

2022/03/30 –  
2022/04/13

Creating a Safer Blockchain Economy

\*Amount confirmed as an average from 5 different tracing methodologies applied  
\*\* Addresses confirmed as recipients of Cryptsy's BTC with all 5 different tracing methodologies applied
